

Mobile scissor lift 200 KG CAPACITY

MANUAL-ASSISTED HYDRAULIC LIFT

The SLM200 mobile scissor lift is an ergonomically designed unit which lifts up to 200 kg with ease, while reducing the risk of strain caused by bending and lifting heavy objects.

The table height can be raised using the manual foot-pump, while the hand-operated release allows the platform to be lowered in a controlled manner.

It is equipped with two fixed castors and two swivel castors with brakes, for extra stability when raising or lowering the platform.

Powder-coated in 'safety yellow' for high visibility and extra protection from wear and tear.

Typical applications

An ergonomic solution for loading or unloading items alongside a conveyor in a process or production environment.

Suitable for manual palletising or depalletising in warehouses, factories and storage facilities.

Features

- Large base with solid rubber wheels.
- Rear braking system.
- Overload by-pass valve.
- Manual push, precision hydraulic foot-pump and quick release system.
- Lockable swivel polyurethane castors with toe guard.
- Hand release lever to lower the table to preferred height.
- Easy to use foot-pump allows user to lift to desired height.
- Mobile scissor lifts feature safety restraint bars that lock the platform into the fully raised position.

Specifications

Order code	SLM200
Platform size (L x W)	1000 x 500 mm
Height range (min to max)	390 – 1000 mm
Handle height	1100 mm
Castors	200 mm diameter (two swivel with brakes, two fixed)
Foot pumps to maximum height	26
Unit weight	60 kg
Lift capacity	200 kg
